

MAINTAIN YOUR VACUUM CLEANER BY AVOIDING THESE 5 MISTAKES

RUNNING OVER THE CORD

Let the vacuum cord out of the way!
You can peel the cable open and make
it unsafe to use.

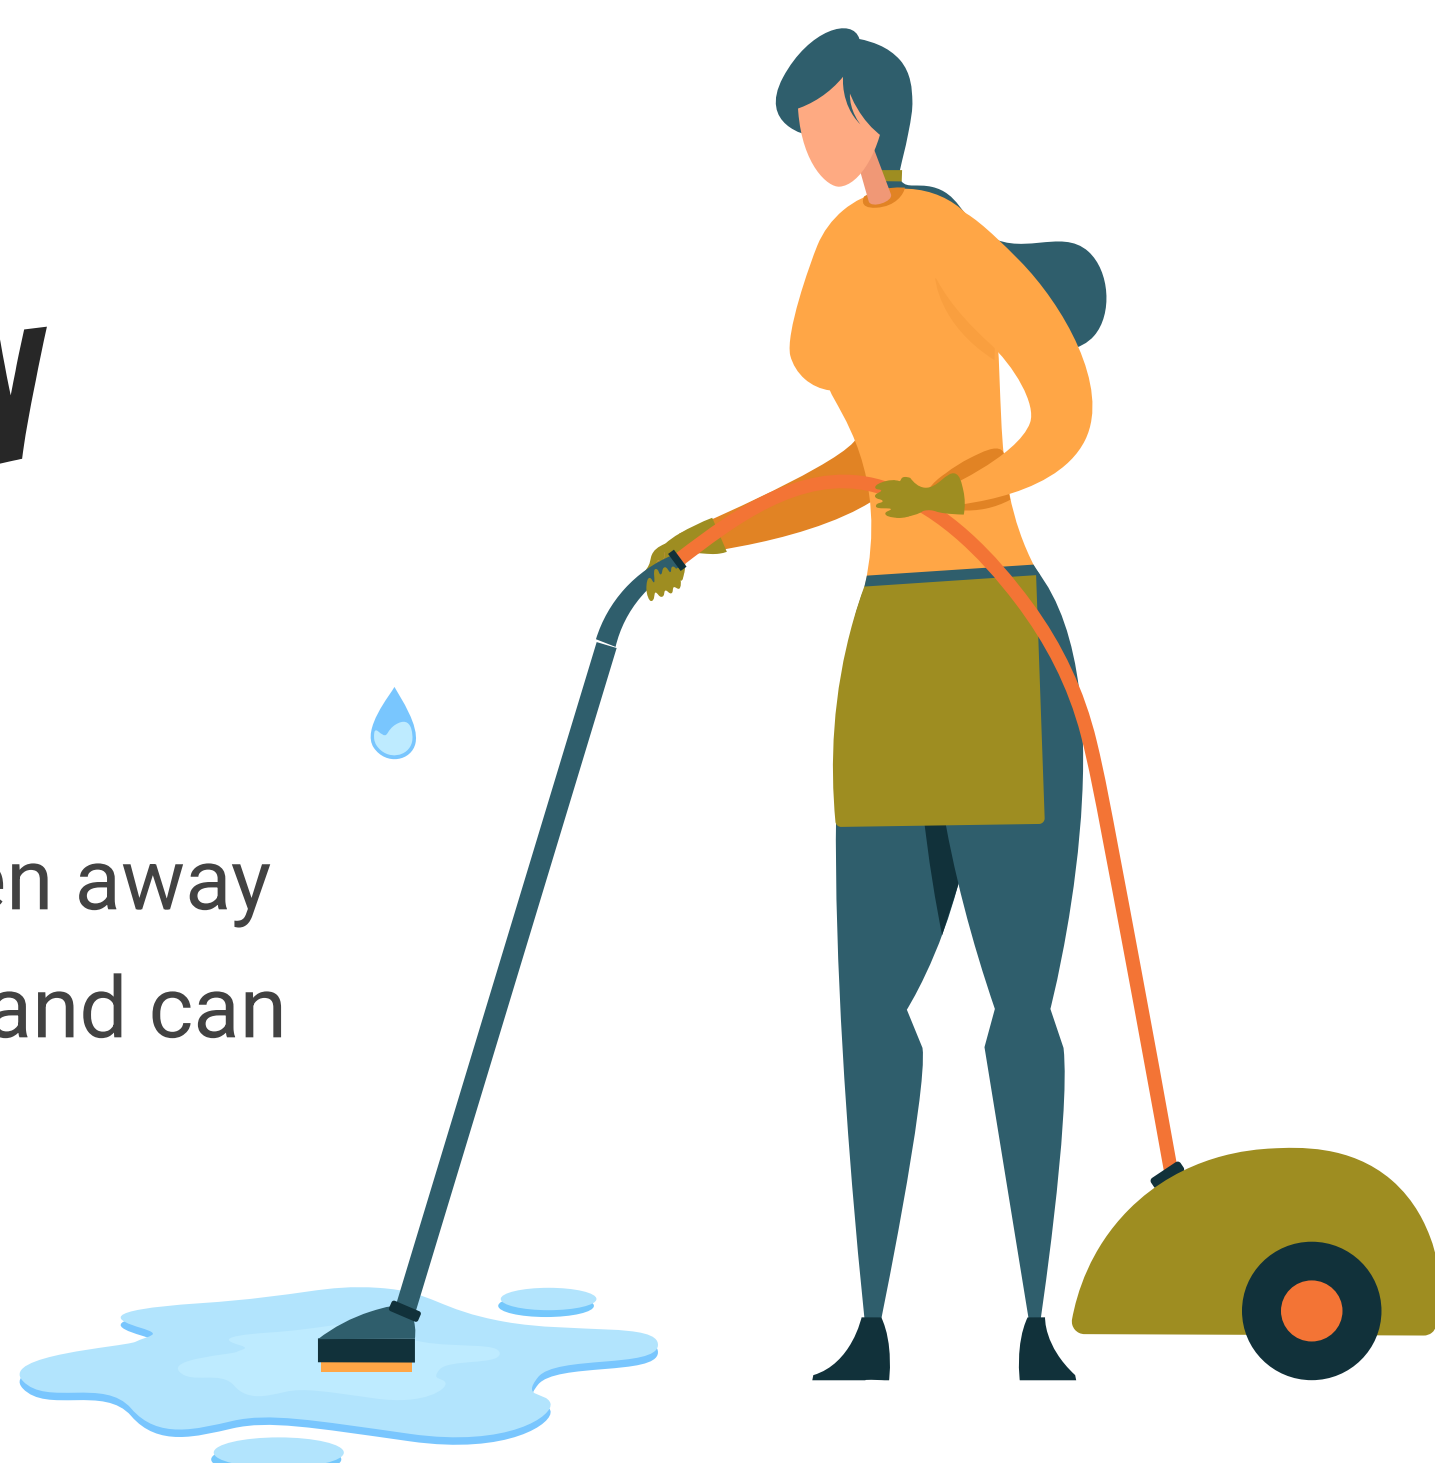

CLEANING WHEN OVERFILLED

Don't overwork your vacuum cleaner if
it's full. Remember to empty it
constantly, so you never lose
vacuuming power.

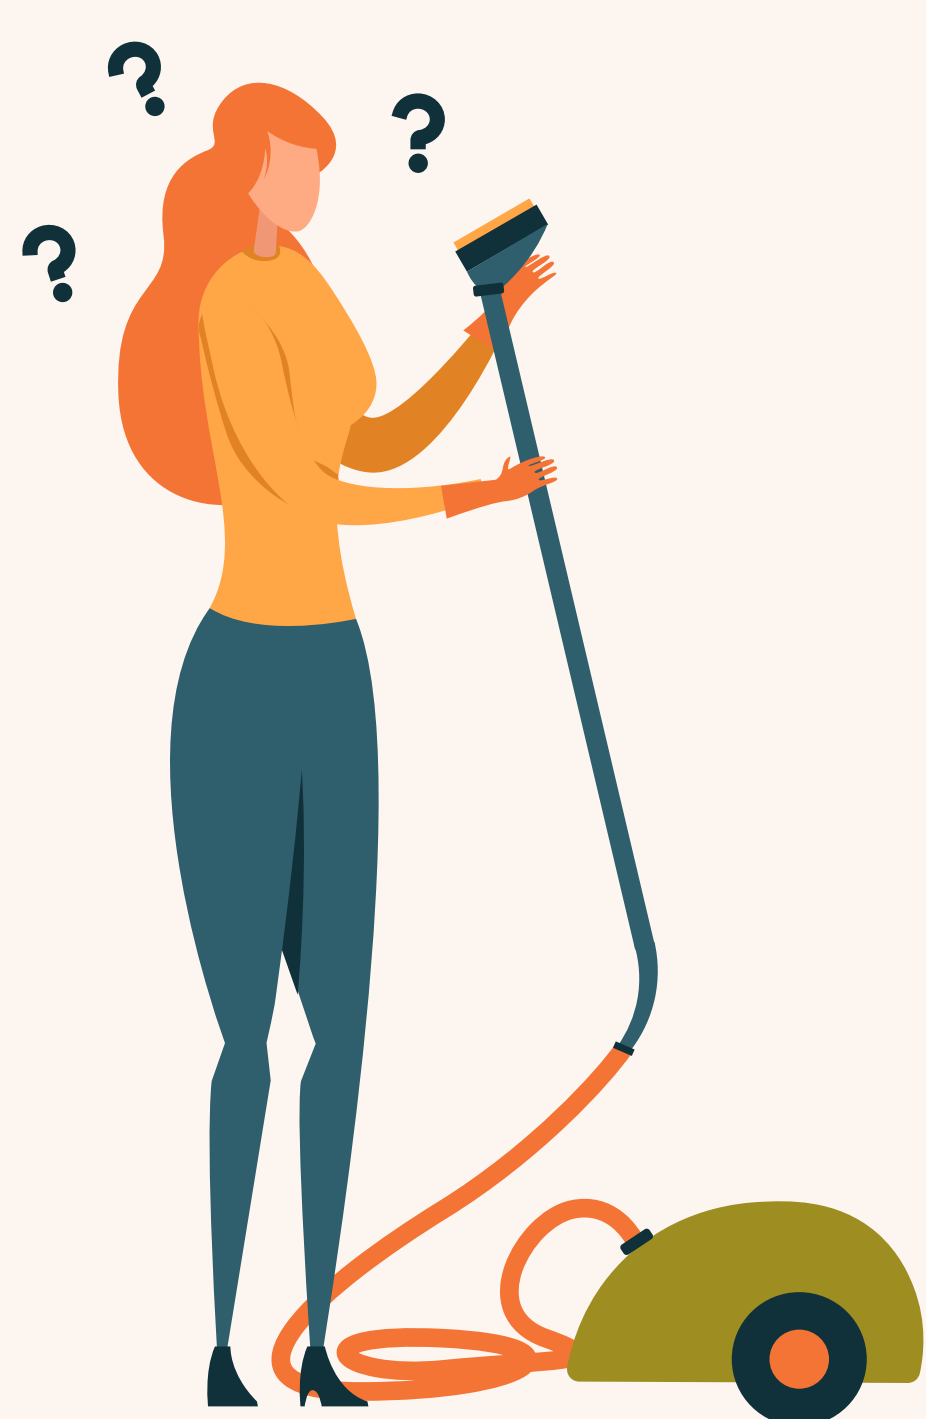

TRYING TO CLEAN UP SPILLS

You've been lucky if you've gotten away
with this. Liquids ruin the motor and can
cause an electric shock!

THINKING THAT IT'S BROKEN

If the vacuum cleaner doesn't turn on,
check for anything stuck or a reset
function; the fix might be that easy.

PICKING UP SMALL OBJECTS

Avoid messing up the motor. If you see
a coin or a screw lying on the floor, pick
it up with your hand.
